US Citizens, please read: http://arstechnica.com/news.ars/post/20050509-4886.ht
12:00 B2 ok, i'll just do that
12:00 Babble you can get at your entire home directory as OS X gets
        configured out of the box.
12:00 Babble turn on Windows Sharing and authenticate as you.
12:00 Babble (from the Windows side)
12:02 -! fugu ~rrecine@www.islandless.net has joined #macosx
12:03 B2 i spend most of my time with the powerbook these days, so i bought
        the 5 user pack of os x and upgraded my g4 and was thought i'd try
        to move as much over to it so i can finally quit using windows as
        much
12:04 Babble B2: you can get at entire home directories on either your
        desktop G4 or the powerbook.
12:04 Babble you just need to log in as the appropriate user for the target
        machine when you connect to it.
12:05 Babble I have a collection of music files sitting in ~/Music on my
        desktop Mac.
12:05 Babble My account for that Mac is a user called "babbs"
12:05 Babble I want to play those files across the network in iTunes on my
        powerbook.
12:05 Babble so I hit the desktop mac in the Network browser and log in as
        babbs.
12:06 Babble that gives me the option of mounting the entire "babbs" home
        dir.
12:06 Babble from there, I can drop stuff into iTunes, copy files, whatever.
12:06 B2 ah, that'd be great
12:07 Babble if it's a volume you want constant access to, open System
        Prefs: Accounts: Login Items
12:07 Babble and drag the mounted volume into the list.
12:07 Babble that way, it'll mount each time you log in on the Powerbook.
12:08 B2 that would be nice, thanks
